LETTER FROM MR. SMITH.

To the Editor of the Springfield Repertory.

Sir: In the past week I have had the pleasure of reading several articles in the Springfield Repertory which have given me much pleasure. The articles were well written and well thought out. I have also had the pleasure of reading several articles in the Springfield Repertory which have given me much pleasure. The articles were well written and well thought out.

Very truly yours,

Mr. Smith.

Climate & Diseases.

It is high time that the community should take in hand the study of the subject of climate and diseases in which they have been so long found guilty. The very idea that the climate may be altered by the cultivation of certain plants, and that the diseases of the country may be decreased or increased by the cultivation of certain plants, has been universally accepted.

The climate of this country, as it is known to us, is the result of the various influences of the sun, the moon, and the stars, and is subject to many and various changes. The climate of a country is influenced by the position of the country, the elevation of the land, the shape of the land, the direction of the wind, and the amount of precipitation.

The diseases of a country are influenced by the climate, the soil, the water, the air, and the people. The diseases of a country are caused by the climate, the soil, the water, the air, and the people. The diseases of a country are caused by the climate, the soil, the water, the air, and the people. The diseases of a country are caused by the climate, the soil, the water, the air, and the people.
